The Client

Our client provides Real Estate ERP solutions With input of over 5000 users from over 100 Real Estate companies

Technologies used

1. Wordpress/PHP
2. Database - MySQL
3. Angular based responsive theme for wordpress
4. Android web view mobile app
5. AWS Infrastructure

Business Challenges

Responsiveness on various screen size.

- To make a system by creating multiple website with same design structure with different content .
- If internet or url is not working so the user will get a notification regarding net/url issue .
- Page wise searching/hits/ analytics for individual sites.

Solution

- we used multisite clone duplicator to duplicate a predesign template into a new website and update with new content .
- By duplicating a site, each website required google analytics tracking code to get no of views .
- We gave much emphasis on design to make it highly usable.

Benifits

- There is a multilevel login roles to manage sites like :
super admin ,site admin,site manager
 - If there will be any change in website, it will automatically refelect in both (web and mobile) apps .
