The Client

Client runs a chain of restaurant with many branches across the country. We have developed the web and mobile apps to bring the restaurants and its branches online, where customers can use the feature of these application to order their favourite dishes at home or workplace through their mobile phone or from their laptop.

Business Challenge

Client wanted that app should give accurate delivery time estimates based on items ordered, customer location and delivery center. Client wanted very strong and fast search feature in app. Client wanted to provide the feature so that user can mark the items for breakfast, lunch, dinner etc. Another challenge was to show multiple orders on a map simultaneously. Also invoice needs to be generated and should be sent on users registered email address once order is delivered
